A line has general equation $y = mx + b$.

A line goes through points (3, 8) and (10, 43). This yields the following two equations:

$$\begin{aligned} 8 &= 3m + b \\ 43 &= 10m + b \end{aligned} \quad \left. \right\} \text{subtract}$$

Solve the equations to find the slope m and y intercept b , and therefore the equation of the line:
